

## Special K 135 sold in Norway

**Franzefoss miljøkalk in Norway has just bought a specialdesigned K 135 to fit their special needs.**

Franzefoss who is one of the largest Limedistributors in Norway, and a good and long term Bredal customer, made a request for a special spreader with a loading shutter and an ABS braking system, these 2 jobs is not everyday jobs for Bredal, but together with the customer and our good suppliers, Bredal has made a K 135 which holds 17000 litres, but only have the loading height of 2,4 m. With this low loading height, the spreader is ideal to tip in from a high tipping truck. And with this system you can cover a lot of ha in a day.

With a boogie axle and the CARGO XBIB (750/60-30.5) wheelmounting the spreader is very gentle on the ground, with a low pressure on the axle, and a high touch to the ground. the spreader is as well delivered with a weight transfer kit, with this system you can transfer up to 1 ton, to the front axle of the tractor to get a better grip.

The braking system on the spreader is also different than normal, as the customer wanted an ABS system that can be used with both a tractor with pneumatic brakes, and one with hydraulic. By this system, the spreader can run with most tractors.

With the new type of lightkit (LED) mudguards, weight transfer kit, the loading shutter, the ABS braking system and much more extra equipment, the spreader looks very impressive.

The spreader is mounted with computer control which can be combined with different GPS systems.
